

Dear Fellow Initiates,

I need your help. My friend Four has gone missing and I'm afraid he's in trouble. He had been spending long nights in the Dauntless computer control room over the last month. He said he was working on a computer project, but he wouldn't tell me what it was. There have been rumors that Jeanine, the Erudite leader, was on the verge of a breakthrough in the development of a new simulation serum. That may have something to do with this. Can you help me find out what happened to him?

Four kept an electronic diary of what he was working on. He was worried that it might fall into the wrong hands so he password protected it using cryptography that he learned in Dauntless control room training. He said that only people with special abilities could decode what the passwords were. I wonder if he meant those that were Divergent. After all, our control room training was developed by the Erudite and it is likely some of the methods would be beyond most Dauntless to understand, especially Max (our leader). In rifling through Four's apartment, I've found some papers and a USB key. I think this might be his diary and the passwords to decrypt each entry. If we can find out what he had been working on each day, we may be able to get to the bottom of his disappearance. I've heard that you're going through cryptography training and might be able to decode these entries. I've enclosed a USB key that has his password-protected diary on it and some of the papers I've found. If you can decode them and let me know what he was working on each day, we'll be able to retrace his steps. You can get them to me at:

<https://crypto.cyberpdx.org>

I'll be sure to send along your login credentials. We might need another way to reach each other that is more immediate as well. I'll have the Dauntless control room techs set up a Twitter account for you to communicate with as well.

I'll be in touch...

Tris

P.S. Four had a knack for solving anagrams. One of his favorite things to do in the control room to pass time was to speed solve Jumble puzzles!
